OUR VISION

Leading innovation to enhance safety & operational efficiency in the fleet vehicle sector

ABOUT ROCK BOARD®

Since its debut in 2013, Rock Board® has revolutionised vehicle identification in the mining industry by offering an innovative LED Vehicle Identification display. This cutting-edge technology ensures that mine vehicles and machinery can be easily identified in any weather condition and from considerable distances, significantly enhancing safety and operational efficiency.

Designed by CEO Damien Russell of Advanced Fleet Signs, Rock Board® addresses the critical need for clear and unmistakable vehicle identification in mining environments, where adverse weather and challenging working conditions are commonplace. By providing a reliable means of

vehicle identification, Rock Board® minimises the risk of accidents and contributes to a safer work environment for all personnel involved, ultimately improving overall safety standards in mining operations.

Damien Russell's inspiration for Rock Board® stemmed from his firsthand experience working in mines, where he recognised the pressing need for a more effective vehicle identification solution. His vision and entrepreneurial spirit led to the development of Rock Board®, filling a crucial gap in the market and changing the landscape of vehicle identification in the mining industry. The global impact of Rock Board® is undeniable, with its presence felt

in numerous mining operations worldwide. As demand continues to grow, Rock Board® is poised for expansion into new countries, further solidifying its position as an essential tool for enhancing safety and operational efficiency in the mining sector.

From its humble beginnings to its widespread adoption, Rock Board® remains committed to driving positive change and setting new standards for vehicle identification in mining, ensuring a safer and more productive industry for all stakeholders.
